THE PRICE IS 21,250 GBP

INDOOR SYSTEM

The Smart Target System consists of one Controller, eight Smart Targets, eight connecting leads, and a set of five gun limiters. The system is powered directly from the Scoreboard and does not need any other power source. The system will work with fewer targets if required and automatically detects which targets are connected.

The SMART system has eight different modes all of which can be set to suit the skill level of the players. The SMART control unit plugs into the Scoreboard and the operator can adjust the length of time that targets stay “alive”, and use any of the 8 game functions all of which make indoor shooting a fast, furious and exciting shooting game. The players shoot at the targets using the shotguns, and when they are hit by the harmless infra red beam from the gun the target flashes, indicating the hit, and the players scores are then shown on the scoreboard.

The four games, **Lasersport/ Skillshoot/ Speedshoot/ Rapidfire** can still be used in conjunction with all of the modes in the Smart Target System adding extra challenges and excitement to the games.

The SMART system simply plugs into the scoreboard and can be set up in minutes, the targets can be freestanding or built into any type of backdrop to add to the presentation.

Indoors-Outdoors-Day or night the system gives you an exciting, entertaining and highly profitable product.
